## REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed to a computer-implemented method and system for locating regions of a target image that match a template image with respect to color and pattern information. Independent claims 1 and 45-46 identify the uniquely distinct feature, "for calculating a hue pattern matching score for one or more luminance pattern match candidate regions, wherein the hue pattern matching score is useable in determining regions of the target image that match the template image with respect to color information"; Independent claims 42 and 44 identify the uniquely distinct feature, "for calculating a hue pattern match score for at least a subset of one or more candidate regions to determine one or more final match regions in the target image and providing output indicating the one or more final match regions in the target image, wherein the one or more final match regions match the template image with respect to color and pattern information". The closest prior art, D'Hooge (USPN 6,295,370 B1), discloses wherein a system creates a template for use with a number of colored pieces in a

patterned children's game or similar application, wherein the colored pieces are formed of a plurality of colors and at least one size; while Bortolussi et al. (USPN 6,681,032 B2), disclose wherein a method and system for acquiring, processing, and comparing an image with a stored image to determine if a match exists, in particular, the system refines the image data associated with an object based on pre-stored color values, either singularly or in combination, fail to anticipate or render the above underlined limitation obvious.

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
